Hi Frank,

Managed to do similar by doing the following:

Rebooted PC

Logged in with a local PC administrator account while disconnected from network

Ran 'msconfig' – opted to untick the ISATRAY entry

Connected the NIC once more

Browsed to the Server folder with the ISA 2004 client files

Ran the set-up – worked fine

Rebooted PC

Logged back in with correct user network account

All working fine now.

Cheers,

David
