ÿ  
did you do this by applying Service Pack 1 for SBS or just updating ISA??? and was this retail ISA??

Hi,

I updated my ISA server from 2000 to 2004 and now I cannot connect to any computer using the Remote Web Workplace. I can log in and see the computers but when I try to connect I get an error screen telling me that the connection couldn't be establish. I ran the internet connection wizard and the remote connections wizard again an I cannot make it work. Everything was working fine with ISA server 2000. What can I do to enable the Remote Web Workplace?

Thank you very much
