Hmm, there isn't a Group called "Microsoft SQL Server"... :(
But I have sometimes installed two Tools called "MSDE Manager" and "MS SQL
Web Data Administration".
Both Tools are running fine and I made sometimes ago a Database for a CMS
with them.
I think also the McAfee Protection Pilot uses also a SQL Database and it's
runing fine...

> it
No, I haven't downloaded it. I ordered it directly from MS. The CDs are
titled with "SBS 2003 Premium Service Pack 1"
and they are completly in German (like our SBS 2003 Prem. is).
