Hi Kevin,

Thanks for posting here.

thanks Dave's input.

For your description, I understand that you want to change date format of the companyweb site. If I am off base, please don't hesitate to let me know.

You can use two methods to control the language and regional settings available for web sites based on Microsoft windows SharePoint Services.

Method1: install Language template packs, when you install the Language template packs, you can specify local IDs on the command line.

When you extend a virtual server, create a new top-level web site, or create a new subsite from the command line, you can specify the locale ID to use. The extendvs, createsite, createsitedb and createweb operations all accept the LCID parameter. Such as 1033 for US English or 3081 for English Australia.

For example, to create a subsite and use the Australia Locale ID for Australia, using the following syntax:

```
stsadm.exe -o createweb -url http://server\_name/site1/subsite1 -lcid 3081
```

You can download it from the following site:

<http://www.microsoft.com/downloads/details.aspx?FamilyID=e7eec77d-4365-4b66-8e8d-9d079c509679&displaylang=en>

Method2: using Regional settings you can customize every web site, including top-level web sites and subsites based on WSS.

1. On the site, click site settings.
2. On the Site Settings page, under Administration, click Go to Site Administration.
3. On the site administration page, in the Management and Statistics section, click Change regional settings.
4. On the Regional Settings page, select the settings to use, and then

Re: Date Format

click Ok.

Note:

Server administrators and members of the SharePoint Administrators group can specify a default time zone to use for all sites on a virtual server.

For more information about these operations, see the Companyweb site help or the WSS Resource Kit, you can down it from the site:

<http://www.microsoft.com/downloads/details.aspx?familyid=1C64AF62-C2E9-4CA3-A2A0-7D4319980011&displaylang=en>

Hope this helps, if you have any further concerns about the issue, please feel free to let me know.

Have a nice day!

Best Regards,

Jenny Wu

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
