Thanks again Brandy!

Checked the permissions on Failed Mail folder:

Can't grant Full Control to Creator Owner to this folder, only on sub-folders and files. correct?

Checked Active Directory Users and Computers, Administrators, Members Tab. When trying to add my administrator account, get the message that that account already is a member. Added another account, logged out – logged in with that account. Still can't see properties of NICs – get the message 'you do not have the privileges, please contact your administrator'.

Installed Win 2003 SP1 again, worked fine. Tried to reinstall Exchange SP3 again, failed when upgrading systemagent. Otherwise OK.

Contacted SAP support again. 'They haven't done anything! Their system works!' All I know is that the system worked before they made changes, but I don't think they made any notes of the changes they did. They just tried several approaches before they found the right one.

Do you think this can have something to do that my Server is upgraded from SBS 2000 and that I some months ago had to do an emergency recover? Can Active Directory be confused by old entries and new ones?

Last but not least, how do I get the mails in Failed Mail Folder distributed? The internal message deliveries does work.

As I'm supposed to be on vacation and my family is eagerly waiting for me, I really would appreciate an quick solution.

Kind regards,

Bengt
