Hello All

Ok I really need your help i'm running Small business server 2003 with exchange now for the past two days I have been getting a error when I try and retrieve my mail now there is a drop box that i'm getting it from and then distrobuting it to the staff now the error reads as follows.....There was an error logging out from the POP3 server (mailbox<mail.company name.co.za [company name@company name.co.za]>). The error is -2147014841 (An operation on a socket could not be performed because the system lacked sufficient buffer space or because a queue was full.) All the messages will remain in the server and its recipients may recieve it more than once.

Now I have had a look at the queue and there is nothing under current session please can anyone maybe help or point me in the right direction.

.
