Is this a continuation of your original post (Client setup won't connect)?
If so, it would be better to stick with one thread rather than creating several independent posts.

That said,

- 1) What operating system is on this computer (XP Pro, XP Home Edition, other)?
- 2) This computer appears to be directly connected to the internet. Is that correct?
- 3) If this is directly connected to the Internet, do you have firewall software installed on this computer?
- 4) Is there a router that this computer is connected to?
