I don't hear no bells! The lead cow always has bells.

Well, I had to go try WU again to get the error message and it proceeded to update itself, and then updated the computer. There were 13 critical updates, and it managed to install 12 of them. The one it failed on is the .Net 1.0 SP3. Which is really strange, as .Net 1.1 is installed. On the other WinXP clients, WU installed SP1 for .Net 1.1. Very strange, but me worry?
