Hi Bryan,

Thanks for letting us know that the solutions point you to the right direction. Thanks for your effort in this issue:

Hope we can meet again in future.

Have a nice day!

| Charles and group,

| The problem has been solved.

| If you will remember, this machine was running 2000 Server. I did a format

| and clean install of Server 2003 Std and chose a different computer name,  
| but the same static IP address.

Re: Frequent event 529 in Securit

| Before I formatted the machine, I created a full image of the system to a  
| network drive, in case I needed to revert back to the old installation  
for

| any reason. For this reason, I did not immediately delete the computer  
| account associated with the old installation of 2000 Server; I kept the  
| account in Active Directory until I felt sure I would not need to revert  
| back to the old 2000 Server install.

| Yesterday morning, I deleted the old computer account from the SBS using  
the

| Manage Server Computers snap-in in the Server Management console. The  
| constant Logon/Logoff Failure events in the Security Log of the "new"  
Server

| 2003 installation stopped immediately. Since yesterday morning, the  
server

| has not logged a single entry in the Security log.

| Thanks again for all the time and effort put in by many people in the  
group.

| You got me pointed in the right direction.

| Bryan

Re: Frequent event 529 in Securit

=====  
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
