Hi Chris,

>From your description, it seems you have configure your network for several time, and you installed ISA on your network, have you installed firewall clients on your clients side, please make sure that firewall clients works well. Please also tell us which mode you select to install ISA, firewall mode or web proxy mode or integrate mode.

If you did not install firewall clients on client side, please install it as a try to see if the issue can be resolved. Make sure that web proxy is configured for all the client computer.

Thanks for your updates. I will be here waiting for your updates.

| Hi Charles,

|

| I misspoke, I have the ISP's DNS configured as forwarded via the

wizzard. NOT under TCP/IP.

|

| Any other ideas??

This newsgroup only focuses on SBS technical issues. If you have issues
regarding other Microsoft products, you'd better post in the corresponding
newsgroups so that they can be resolved in an efficient and timely manner.
You can locate the newsgroup here:

Re: sbs 2003 Clients do not have internet access

Re: sbs 2003 Clients do not have internet access

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
