Hi Jake,

Thanks for updates.

I understand that you apply different permission to different user. It seems to be permission setting issue, as I know we did not recommend configure permission individually for each user which might cause some interruption and confusion, it is your best interest to configure the permission as group. For detailed configuration of permission setting, I suggest you refer to Windows sharepoint services administration guide:

<http://www.microsoft.com/resources/documentation/wss/2/all/adminguide/en-us/stsf16.mspx>

As I know, if you access the content that you did not have permission, you will be prompt to input credential to enter into the content. It is the by design issue. But you refer to that User A is the administrator of couple of WSS subsites, and user B have full permission on some site while user A did not have permission on them, so I am little confuse by it. Could you explain it more clearly.

Thanks for your understanding.

Best regards,

Charles Yang (MSFT)

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding

Re: Help Domain user associated to wrong Wss account

newsgroups so that they can be resolved in an efficient and timely manner.
You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

|
| Hello,

Re: Help Domain user associated to wrong Wss account

Re: Help Domain user associated to wrong Wss account

|
| Let me see if I can be clearer.
|
| Both DOMAIN\UserA and DOMAIN\UserB are regular domain users only
|
| DOMAIN\UserA is an administrator of a couple of subsites on wss
|
| DOMAIN\UserB is just a normal contributor on wss
|
| DOMAIN\UserB logs into the computer within the domain on the LAN side.
|
| DOMAIN\UserB has all of the perms once on the wss site of DOMAIN\UserA.
If
| the user tries to get to a site the DOMAIN\UserA doesn't have perms
| DOMAIN\UserA login name comes up prompting for a password. If
DOMAIN\UserB
| clicks on edit personal information on site settings of wss DOMAIN\UserA
| information shows up.
|
| What I think happened:
| It seems that DOMAIN\UserB was logged into a local computer within the
| domain. DOMAIN\UserA came to use computer and when prompted for a
password
| on wss they entered in DOMAIN\UserA...password and clicked save password.
| Thus associating DOMAIN\UserB domain account with DOMAIN\UserA wss
account.
| When we changed DOMAIN\UserA domain password then the DOMAIN\UserB went
to
| wss and was prompted for a password, which we had DOMAIN\UserB...password
| and clicked save password.
|
| My concern is that some other accounts might have been compromised this
way.
| How can we audit this verifying that the domain DOMAIN\UserZ really links
to
| DOMAIN\UserZ of wss? Hope I was clearer....
|
