Hi Jake,

Thanks for updates.

As I know, if we create the user account via "add user wizard" the WSS permission will be configure according to default setting. Since users also change the permission on the WSS sites, so the permission will be relate to WSS setting, after discussing with our DEV team, we can not use SBS audit to audit the permission on WSS sites, it should be a WSS permission issue. I suggest you check the documents I refer to, I will also try my best to help you find if there is any audit tools on WSS side, as I know there are no direct relation with WSS permission and SBS users.

Thanks for understanding on this issue.

Best regards,

Charles Yang (MSFT)

Microsoft CSS Online Newsgroup Support

Get Secure! – [www.microsoft.com/security](http://www.microsoft.com/security)

---

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:  
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Re: Help Domain user associated to wrong Wss account

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

| Charles,  
|

| Thanks for the response. We do have the perms set up as groups. We have

| a top site with 3 sub sites. Both of the users are contributors of the top

| site, while UserA is an admin of some subsites and UserB is just a

| contributor. The problem seems to be that when UserA tried to do something

Re: Help Domain user associated to wrong Wss account

| (the local computer was logged in as UserB's domain account) the wss site  
| prompted for the password, as it should, since UserB didn't have the  
| correct  
| permissions. Then UserA put in login and password and saved password to  
| access functions on wss. It seems that then the system associated UserA's  
| wss perms to UserB's domian account. Now while I have to educate the  
| users,  
| AGAIN, not to user other peoples computers if not logged in themself, how  
| can I audit to verify that each domain\user is associated to each wss  
| domain\user?

| Jake
