HI,

Thanks for updates.

>From your description, I am sure that your administration components is corrupted, if you also could not find what I refer to about integrate setup, it might be caused by the incomplete SBS installation. If this is the issue, it is your best interest to restore the SBS or rebuild SBS with a new install. It should be a long process if you want to repair it without reinstall.

Because of the administration components corruption, so we could not use "User wizard" to change password of user.

Thanks for understanding. Please feel free to post back.

Best regards,

Charles Yang (MSFT)

Microsoft CSS Online Newsgroup Support

Get Secure! – [www.microsoft.com/security](http://www.microsoft.com/security)

=====  
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

RE: Server Mangement not available

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

RE: Server Mangement not available

RE: Server Mangement not available

| X-Tomcat-NG: microsoft.public.windows.server.sbs

| I have managed to get Server management open (I configured to allow access to administrator) but now is giving a snap intialize error.

| Another problem, how to create a new user. I see a user profile which I would like to use but don't have the password for it & cannot delete as it is on a primary domain. Tried taking it off domain but needs it replaced with another before it can do that & there isn't any other. What to do?
