Even though there is no solution you have clarified things for me so thanks to all. They said it would be problematic but that they had a solution that would enable us to view the folder "on the web" though the instalation guy has now backed out of all this, i got a strong feeling that these guys had limited knowledge of SBS. Even me the total novice has found some major issues.

On the email issue would this be solved if we got our own connection and therefore our own domain?

Thanks again to all

.
