Hi posting this in SBS as SBS setups pre-configure a lot of ISA – and I'm pretty sure someone's installed ISA '04 in SBS 2K3 that wants to allow AOL (9SE) to work behind ISA. I did find and followed instructions in Tech Net about configuring – but although we can sign into AOL and send and retrieve emails – browsing webpages brings up a blank page – sometimes with an \* in top corner. Before the attempt to configure ISA... not even blank pages would come up. There must be a way! Thanks in advance.

.
