Hello Ryan,

Thank you for posting back!

First of all, I strongly suggest you that read the following KB article and strictly follow the steps:

You cannot open file shares or Group Policy snap-ins when you disable SMB signing for the Workstation or Server service on a domain controller
<http://support.microsoft.com/?id=839499>

If you exported Group Policy before, please see the following KB article:

833319 "Access Denied" error message after you restore GPOs from a CD-R backup
<http://support.microsoft.com/?id=833319>

If the issue persists, please collect the following information:

Ryan, please understand, the information I required in my previous reply is very important to isolate the issue, we cannot do any research for you without this information. I am greatly appreciated your co-operation to gather the information I require:

1. How did you edit GPO and got "Access Denied" error message? Please see step a) in my first reply.
2. In your first post, you mentioned "This server is bone fresh", "I've never EVER EVER modified a GPO or anything, and I cannot!", but in your last reply, you mentioned "I did edit the GPO's per another issue I was having". Ryan, I need to know what happened. Please fully describe "I did edit the GPO's per another issue I was having", what GPO did you edit?
3. You mentioned "I turned off SBS signing by using the policy editor". What is "SBS signing" and "policy editor"? Please fully give out the steps how you did so.

Re: Error 1030/1058 in EventViewer + "Access is Denied" trying to edit GPO's

4. On the server, run "eventvwr" (without quotation marks), double click each of the error events, click the Copy button and paste the full content to the Newsgroup.

5. Gather Filemon log. Please refer to step c) in my first reply.

I am appreciated your time and co-operation, and looking forward to hearing from you!

Best regards,

Brandy Nee

Microsoft CSS Online Newsgroup Support

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
