Hi Jenny,

Thanks so much for your reply. I have entered comments under each of your suggestions.

I restarted the server and did not receive any errors. This did not solve the problem.

> 2. Does the issue happen in client computers in domain? If so, please

I can't access companyweb from any domain client. I get the same network login prompt and valid user names and passwords are rejected.

> 3. Can you access internet when logon the server? When you logon client

> PCs

> in domain, can you access internet?

I can access the internet from the server or any client pc without a

Re: Can't access companyweb

problem.

> 4. Was your SBS server clean installation or upgraded from SBS 2000 or NT?
This was a clean install on a new Dell Poweredge server.

> 5. Can you access RWW or OWA from internet?
I have not attempted to access via RWW or Outlook. I am not using exchange at this time.

> 6. Is there only 1104 error in Event Viewer? If not, paste that accurate
> error info.

The only other error I get is 9099 from MExchangeSA
The MAD Monitoring thread was unable to read the state of the services, error '0x80041003'.

I have another message that pops up when I access a user profile:
"Could not load the Dial-in profile for this user because:
Either a required impersonation level was not provided, or the provided impersonation level is invalid."
It seems that this started happening at about the same time.

The system has been working fine for the last 3 months. And now this...

I never changed anything in GPO

> 2. Delete any disabled group policy.
None have been disabled.

> 3. Run gpupdate /force command to refresh group policy.

> 4. Run iisrest command to restart IIS.

Performed #3 and #4.

>

> Try to test, how about the result?

No change. Still not working properly.

I can access all shared folders from all the clients. I can even access shared folders from my Linux workstation! I just don't know what has changed.... :-(or where to look. At this point the problems seem to be restricted IIS
