Hello Theo,

Thank you for posting back!

I am sorry for the delayed response due to weekend. Please understand that the newsgroups are staffed weekdays by Microsoft Support professionals to answer your systems and applications questions. Your understanding is greatly appreciated!

I understand that you have created a shared folder Roaming\$ to store the domain users' roaming profiles, when you trying to view the properties of the sub folders, you got access denied error message and you found the sub folders are 0 bytes . If I have misunderstood your concern, please let me know.

Please see my following information:

1> The permissions of each username folder in the roaming profile share should inherit the share permissions or is there some other way in which those permissions are set?

Answer: When domain users log on their client workstation, their roaming profile folders will be created in Roaming\$ automatically. These sub folders have own permissions, user cannot access other users' Roaming Profile folders, so it not inherited from Roaming\$.

2> If you want to access domain users' roaming profiles folder, please make sure that you use the Administrator account to access the shared folders. If you have already used the Administrator account, please check whether Administrator account has taken the owner ship of the shared folder. To do so, please see:

- a. Right click the sub folder in Roaming\$, go to Properties, Security tab. Click Advanced.
- b. Owner tab.
- c. Click Other Users or Groups -> Advanced -> Find Now, select your account

Re: Local permissions for roaming profile to work

in the Search Results Pool.

d. Click OK four times.

e. Can you access the folder now?

f. If you can access the folder, please check whether there is any thing recorded inside, then we go continue troubleshooting.

Thanks for your time, and I am looking forward to your reply!

Best regards,

Brandy Nee

Microsoft CSS Online Newsgroup Support

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
