I've just installed SBS 2003 and everything went suprisingly well. Now I've received notification that my 6 GB partition on the server has 7% free.

I've followed the recommended size in the instructions, (We're a small office / 5 users).

1. Is 6 GB unrealistically small? If so, how can I increase the partition?
2. If 6 GB is adequate, what whappened? What can I delete?

Thank you all for your help!

.
