I've indstalled Microsoft Sahrepoint Services 2003. Everything works normally, but I would like to have a rss web part. I've tried to add the web part from "<http://x5.tsiokos.com/posts/2005/01/11/wss-rss/>. That went well and it appear on my screen. But I do not see the rss feed only the title. And i shows a message like. "An error occurred while processing the data for this request. Contact the server administrator for more information". Does some one know what is caussing this problem?
