Hi Joe,

Thanks for your update! I am glad to know the MSDE migration issue is getting fine now. I appreciate your time and effort to try my suggestions and get this resolved.

Yes, as you done, we need register the instance in SQL Enterprise Manager so that we can manage it in SQL Enterprise Manager. The detail steps:

A. Click Start, point to All Programs\Microsoft SQL Server, and then click Client Network Utility. Make sure "Enable shared memory protocol" is selected.

B. Open Enterprise Manager, right-click a server or a server group, and then click New SQL Server Registration. Click Next.

NOTE: If you selected the From now on I want to perform this task without using a wizard check box the last time you used the Register Server Wizard, SQL Server Enterprise Manager displays the Registered SQL Server Properties dialog box. Otherwise, the Register Server Wizard is started.

C. In the Server box, type the instance name, ie, <sbsserver>\SHAREPOINT, and click Add and then Next.

D. Click "The Windows account information I use to log on to my computer (Windows Authentication)", and then click Next.

E. In the Server Group list, click a server group and click Next.

NOTE: If the group you need does not exist yet, create it by clicking the build (...) button, and then completing the Server Groups dialog box.

F. Click Finish, and then Close.

After we register the instance, we can see it at the left panel of SQL Enterprise Manager immediately. If it doesn't appear, we can restart the SQL Enterprise Manager to resolve it.

You can follow MS KB article 837367 to turn on full-text search in WSS:

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
