-

over the past 4weeks our windows sbs 2003 server has been failing

1st the exchange and iis stops working

the exchange wont restart because the "iis admin service" isnt runing and when you try and restart iis admin service it errors out with

"The IIS Admin Service service terminated with service-specific error 2148073478 (0x80090006)."

can any one help me with this?

i've tried all new hardware and full reinstalls with all the updates yet the problem isnt going away.

Thanks

Thomas
