Hello Matt,

Thank you for posting to the SBS Newsgroup.

Thanks a lot Javier's input!

As Javier said, SBS 2003 has the Default Web Site listening on port 443 we cannot make the companyweb site to listen on that port. That's why we use port 444.

To publish the companyweb site to the Internet, we can run the CEICW and select the item on the "Web Services Configuration" page if you have 2 NICs while not have ISA installed. If you have ISA installed, you should follow the steps in the following KB article to publish the site:

838304 How to publish <http://Companyweb> to the Internet by using ISA Server  
<http://support.microsoft.com/?id=838304>

Also see:

838429 The "My Company's Internal Web Site" link on the default Web site  
<http://support.microsoft.com/?id=838429>

If you only have 1 NIC on the server, the companyweb site is by default published to the Internet. With any method, you must use <http://fqdn:444> to access it from the Internet.

If you really want to do so, you may need to apply a Public IP address for the external NIC on SBS Server and use ISA server to publish it and redirect the port.

Hope this information answers your question. If anything is unclear, please feel free to let me know. I am looking forward to hearing from you!

Best regards,

Brandy Nee

Microsoft CSS Online Newsgroup Support

Get Secure! – [www.microsoft.com/security](http://www.microsoft.com/security)

=====  
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:  
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
