I am running SBS2K3 Premium. 12 users. Server runs DNS, Router runs DHCP. Have a Cannon 3220 Printer/Scanner which is "network ready". All users can print to it, but it does not show up in the domain or in one of the two workgroups also on our LAN. It has the capability for "pushing" a scan from the machine to your desktop, or "pulling" a scan from your desktop. Pulling will work, but it errors out when pushing a scan. The one exception is the one user who is on the LAN, but not joined to the domain. Question: How to I introduce the printer/scanner to the domain so that they will play together properly?

Brown
