Hi Dave,

Thank you for posting in SBS newsgroup.

According to your post, do you mean you have changed the password through entering CTL+ ALT +DEL to match domain password on laptop, however you can not logon to domain using the changed password.

As I know, if you have a machine that is currently logged on with cached credentials and use VPN connection to connect your domain and change the domain password, your local password cache may not be changed.

You may use the VPN at the logon screen to connect to the domain and then log into domain to change the password and local password cache.

1. At the logon screen check the "Log on using dial-up connection" box, and select the VPN connection to connect to domain.
2. Then log into domain and try to change the password.

You can also refer to the following KB articles to see if it helps:

306992 How To Manage Stored User Names and Passwords on a Computer in a Domain

<http://support.microsoft.com/?id=306992>

306541 How To Manage Stored User Names and Passwords on a Computer That Is Not

<http://support.microsoft.com/?id=306541>

If you have any concerns or questions regarding the issue, please do not hesitate to let me know.

Thanks for your time and I look forward to hearing from you.

Best regards,

Crina Li (MSFT)

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

| |
| Actually that is the problem, they are domain computers. I have three
laptops
| that are remote right now and one that is in the office. All four have
| mismatched passwords and I can't get them to sync up.
|
| Even the laptop that is in the office. I have to log on with on password
and
| then use another password to get access to resources on the server. Yes
the
| laptop is part of the domain and is logging into the domain at the login
| screen.
