Hi,

Thanks for updates.

If possible, could you paste the detailed error message, it might be helpful to our understanding on this issue. Please also make sure that you have rerun CEICW to make sure the certificate is correctly assigned to exchange.

In the mean time, do you encounter any problem when accessing the public folder from OWA or outlook 2003?

We really appreciate your time to cooperate on this issue, please post back your error information as your convenience. I am here waiting for your updates.

Best regards,

Charles Yang (MSFT)

Microsoft CSS Online Newsgroup Support

issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

RE: receive an SSL Certificate error message when you view public

RE: receive an SSL Certificate error message when you view public

- | 1. i do not have ISA installed, am running SBS2003 std edition, the certificates were created by ourselves. using local domain name.
- | 2 we do have two NIC installed, default exchange server ip address is the same as the LAN card, a second virtual smtp virtual server was on the WAN card, but has since been deleted this smtp was created while trying to configure exchange sync for PPC
- | 3 all public folders are accessible from both outlook 2003 client and via OWA

| we have run your recommendations but to no effect on the public folders

RE: receive an SSL Certificate error message when you view public

RE: receive an SSL Certificate error message when you view public

|>
|> A. Click Start on your SBS server, click Server Management.
|> B. Click To Do List and then click "Connect to the Internet".
|> C. Click Next, select connection type and click Next.
|> D. Select Enable firewall and click Next.
|> E. Go through the steps until the Web Server Certificate page shows.
Click
|> "Use a Web server certificate from a trusted authority" and browse to
the
|> location of the certificate.
|> F. Go through all of the steps to finish the wizard.
|>
|> 2. Remove SSL from the Exadmin virtual root in IIS:
|>
|> A. Click Start, click Run, type "inetmgr" and click OK.
|> B. Expand your server\Web Sites\Default Web Site, right-click Exadmin
and
|> then click Properties.
|> C. On the Directory Security tab, click Edit under Secure
Communications.
|> D. Click to clear Require 128-bit encryption, and then click to clear
the
|> Require secure channel (SSL) check box.
|> E. Click OK twice.
|>
|> 3. Run "iisreset".
|>
|> 4. Click Start, click Run, type "services.msc" and click OK. Restart
the
|> Microsoft Exchange System Attendant service.
|>
|> 5. Test again.
|>
|> I appreciate your effort on this issue, please feel free to post back
your
|> information and results. I am glad to be of further assistance.
