Hi Hendrik,

Thanks for your information.

For the error information:

Security Exception

Description: The application attempted to perform an operation not allowed by the security policy. To grant this application the required permission please contact your system administrator or change the application's trust level in the configuration file.

Exception Details: System.Security.SecurityException: Request for the permission of type System.Web.AspNetHostingPermission, System, Version=1.0.5000.0, Culture=neutral, PublicKeyToken=b77a5c561934e089 failed.

Based on my research, the issue should be caused by permissions. Please follow below steps to try to resolve it:

I. Please ensure "Local Service" and "Network Service" has the following permissions of the folder:

The folder: %windir%\Microsoft.NET\Framework\v1.1.4322

- Local Service Read & Execute, List Folder Contents, and Read permissions
- Network Service Read & Execute, List Folder Contents, and Read permissions

The folder: %windir%\Microsoft.NET\Framework\v1.1.4322\Temporary ASP.NET Files

- Local Service : Full Control permission
- Network Service : Full Control permission

II. Please check the following registry key and verify it:

The value of "Current_NameSpace_Catalog" should be "Namespace_Catalog5", you can find the registry key in the following:

HKLM\System\CurrentControlSet\Services\Winsock2\Parameters

Re: Server Reports empty

III. Please check the setting in IIS:

1. Open IIS snap-in.
2. Go to Default Web Site/Remote.
3. Right click Remote and click Properties.
4. Click Directory Security tab.
5. Click Edit under "Authentication and access control".
6. Make sure that only the "Integrated Windows Authentication" is checked.
7. Click Edit under "IP address and domain name restriction".
8. Make sure that "Granted access" has been selected.

And then please restart IIS services and then check if this issue persists.

Please note that after we run the Monitoring Configuration Wizard to reset performance and usage settings, the original performance and usage data will be removed. The server will start to collect new counter value from the beginning. It will take more than 24 hours so that the report can be generated.

I appreciate your time to the issue! I am happy to assistance of you and look forward to your reply!

Have a nice day!

Sincerely,

Jenny Wu
Microsoft CSS Online Newsgroup Support
Get Secure! – www.microsoft.com/security

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Re: Server Reports empty

Any input or comments in this thread are highly appreciated.
