Can't boot into SBS2K3. I need to get files off of the disk but am having some trouble.

By adding the disk as a slave to an XP Pro computer, I can read some files but can't open the important "Users Shared Folders" folders ("Not accessible. Access is denied."). Is there a way for me to authenticate for this folder or should I reset all of the permissions? Essentially, I just want to pull the files out of this folder, back them up, and reinstall SBS2K3. Thanks.

-Matt
