I'm not sure if it's a bug or not, but indeed message size is the culprit.

I keep an eye on those alerts, as you get a quick indication of what type of large files are being received; and whether or not particular users need to have limits placed on message size.

In your example case, by the Subject indicated – it appears to be an email/attachment with a valid business purpose. Not so with all 'large emails', if you know what I mean ;-).
