Maybe I am misunderstanding but in my scenario (SBS03 + Serv03 terminal server) I have added the printers myself and the users are free to use them. I did not have to change any policy to do this. There are many changes I have made policy wise (though nothing in regard to printers) but the changes were all made after I had everything set up and tested.

Are you wanting your users to be able to add printers at will? What did you change or disable in policy?
