Hi Denis,

Thanks for your update!

Technical speaking, when we send fax with Outlook, the cover page file is sent as attachment is not a bug since the cover page file and the fax content are different files. There is no option or patch to it. One workaround is that when you send fax, you copy the cover page content directly in the fax content, manually modify recipient information and then input fax main content under it. It seems to be ugly.

What is your mean of "there is no option for me to use Fax Client."? If have not install the shared fax client, you can install them refer to steps in my previous post. Please try to test.

If you have any further concerns to the issue please let me know. I am happy to be assistance to you!

Have a nice day!

Sincerely,

Jenny Wu
Microsoft CSS Online Newsgroup Support
Get Secure! – www.microsoft.com/security

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

RE: Using Fax server with coveragepage and Outlook 2003 problem

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
