Hi Luke,

Thanks for your update.

The Exchange Migration Wizard can migrate all user mailboxes. However, you must manually export mailbox rules because they are not preserved. Additionally, the wizard does not migrate the Administrator account mailbox and rules or the public folders. You must export them from the source server and then import them to the destination server.

To export public folders and the Administrator account mailbox and rules, you can refer to the following steps:

1. On a client computer running Outlook, export public folders to a .pst file.
 - a. Log in as Administrator to a client computer.
 - b. Open Outlook.
 - c. In Folder List, select All Public Folders.
 - d. Follow Outlook help instructions for exporting all public folders to a pst file. Ensure that you select the Include subfolders check box on the page where you select the folder to export from.

*Note: The user account that you are logged in to for exporting the public folders must have permissions to each public folder. Otherwise, you will not be able to view or access all public folders.

2. Export the Administrator account mailbox to a .pst file.
3. Export the Administrator account mailbox rules.

Yes, you are right. After we re-install the server box with the same domain name and computer name, there will be different SID in AD. So you need re-join client workstations to workgroup mode and then join the SBS domain. It is better to use setup client computer wizard (connectcomputer) to join client workstations.

What is more, I would like to introduce you take a look at the following documents to get some information about migration.

RE: Single Server Upgrade Exchange Question

After migrate AD information, you can use the Exchange 2003 version of ExMerge.exe tool to import the mailboxes from the PST files.

Exchange 2003: Mailbox Merge Wizard (ExMerge)

<http://www.microsoft.com/downloads/details.aspx?FamilyId=429163EC-DCDF-47DC-96DA-1C12D67327D5&displaylang=en>

Migrating from Small Business Server 2000 or Windows 2000 Server to Windows Small Business Server 2003.

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.
