-

I have seen a few posts on this one, so I thought I would share my experience and see if Microsoft would like to use it.

(S)ubjective:

ICW Fails on Firewall Configuration after Un-Installing ISA 2004 (SBS 2003 Premium Technologies SP1)

(O)bjective:

SBS 2003 SP1
Premium Technologies
ISA 2004 Removed previously
Running CEICW Wizard

(A)ssesment:

***** icwlog.txt *****

calling RegisterMSBOExchangeBP (0).
Error 0x1 returned from call to RegisterMSBOExchangeBP().

***** icwlog.txt *****

Server seems to work fine

ICW Error: RegisterMSBOExchangeBP

Other potentially related issue is that Server Reports to Administrator:

***** Server Performance Email *****

From: Administrator

Sent: Monday, January 09, 2006 6:00 AM

To: SBS Admin User

Subject: Server Performance Report – LABYRINTH

Bad Request (Invalid Hostname)

***** Server Performance Email *****

(P)lan:

Turns out in my case my IIS WebSite setting had something to do with it:

Specifically the Default Web Site had no entry for

Interface | Port | Host Header

Default | 80 |

and additionally had an entry for

Internal NIC | 80 | 127.0.0.1

and

Internal NIC | 80 | localhost

By ensuring the default (Any Unassigned) was set to 80, and ensuring the

localhost and 127.0.0.1 were set to the same, my CEICW and Server

Performance e-mails began to work.
