I want to implement VPN connections to few laptops used by one of my client staff. They are very concerned about the security also. I know in SBS default you get the PPTP connection. But I want to know if this is secure. What about the IPSec option is that better secure than the PPTP? if that so how to implement if on the SBS server side and in the client machines sides? (Svr= SBS 2003, clients= Windows XP Pro) no ISA.  
Can anyone give me some idea to solve this matter. Thanks in advance for any information

Regards,

Susantha
