It did happen again but I can see what is happening there. I have a Hp printer that get confused once in a while and start to resintall itself every 2 second. Once this happen it crash my jet database, because (i guess) the system needs to login every 2 second to reinstall the printer dirver. When I fix the printer problem (somehow) the everything comes back to normal. We are planning to change the printer anyway since the hp printer doesn't have dirver for sbs (and we also want a better networked solution for printer device)

thanks for all your good advice!

RE: Scecli and jet database event 1005 and 1202 repeating

Thanks for all these info,

I went through the procedure again but this time it won't work. Apart

from

that event everything seems to be working fine, apart from the server

web

site. Any other way to rebuild this database ?

Thanks

""Nathan Liu [MSFT]"" wrote:

Hi Damaru,

Thank you for your kind update.

As you mentioned, this issue occurred again, let's refer to use the procedure described in the KB article 278316 to re-create the local

Group

Policy file.

278316 ESENT event IDs 1000, 1202, 412, and 454 are logged repeatedly

in

the Application log

<http://support.microsoft.com/default.aspx?scid=kb:EN-US:278316>

Since the issue may occur if the local Group Policy database file is corrupt, this issue can also be caused by antivirus software. Make

RE: Scecli and jet database event 1005 and 1202 repeating

100%

sure that you do NOT have any File-level antivirus scanning ANY

exchange

directories. The most common cause of missing log files is because a File-level antivirus application has quarantined or deleted a log

file

because it detected a virus in one of them. If you are running

file-level

AV, then you need to make sure you exclude all of the exchange

directories,

especially the log file directory and database directory:

-Exchange databases and log files

-Exchange .mta files (default location: \Exchsrvr\Mtadata)

-Exchange message tracking log files (default location: \Exchsrvr\Server\_Name.log)

-Virtual server folders (default location: \Exchsrvr\Mailroot)

-Site Replication Service (SRS) files (default location:

RE: Scecli and jet database event 1005 and 1202 repeating

\Exchsrvr\Srsdata)

–Internet Information  
Service (IIS) system files  
(default location:  
\%SystemRoot%\System32\Inetsrv)

–Internet Mail Connector  
files (default location:  
\Exchsrvr\IMCData)

–The working folder that is  
used to store streaming  
temporary files

that

are used for message  
conversion. By default, this  
working folder is

located

at \Exchsrvr\MDBData.

–A temporary folder that is  
used in conjunction with  
offline

maintenance

utilities such as Eseutil.exe.  
By default, this folder is the

location

that

you run the .exe files from,  
but you can configure this  
when you run

the

utility.

–DC's sysvol folder and all  
its subfolders  
(C:\Windows\Sysvol)
