- 

Unfortunately, I can't seem to locate the problem.

Did you experience any errors or problems during the SP1 install (or anywhere in the install process)?  
Was this an install from OEM CDs?  
Are you at a point where you could reinstall? (the dreaded "R" word).

Yes very basic configuration. And everything in the event viewer is perfect. Everything seems to be functioning fine, except running the icw.

[news:e4byfoVSGHA.5924@xxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:news:e4byfoVSGHA.5924@xxxxxxxxxxxxxxxxxxxxxxxxxx)

There isn't a router on the network, right? So, it's just 2 NICs in the server and you're using ISA 2004 as your firewall. And your network is physically configured the same as this diagram:

<http://www.smallbizserver.net/Articles/tabid/266/articleType/ArticleView/articleId/77/Two-Nics-a-s>

The service pack is included on the disks.

news:%23mrtPeVSGHA.2300@xxxxxxxxxxxxxxxxxxxxxxxxxxxx

Does this server have SBS 2003 SP1 and  
ISA 2004 installed? And did you  
install them according to:

How to install Service Pack 1 for SBS 2003

<http://www.smallbizserver.net/Articles/tabid/266/articleType/ArticleView/articleId/68>
