Hello Brian,

Thank you for posting back!

I am sorry to keep you waiting since I were ill these days.

I understand that the problematic computer is a Windows 2K client workstation. In this case, please help me to gather following information for research:

1> If you restart the problematic client workstation in to Safe Mode, will this issue occur?

2> Please check whether the problematic client logs on any Terminal Servers? If yes, please log it off the sessions, and then test the issue again.

3> In your previous reply, you replied as "error copying profile....., creating backup, your settings will not be save, contant your administrator". I am sorry but I am still not clear what exact error message you have encountered. Please type the error message word by word to the Newsgroup for accurate research.

4> On the problematic client workstation, run "eventvwr" (without quotation marks), right click Application, select "Save Log File As". Please save as evt file and send it to my mailbox.

5> If you ask the problematic client to log on another good client workstation, will this issue occur?

6> Please go to the %SystemRoot%\Debug\UserMode\ and rename the userenv.log, and help me to gather the latest userenv.log again.

Please make sure that you have input the correct DataValue for registry key: HKEY_LOCAL_MACHINE\Software\Microsoft\Windows NT\CurrentVersion\Winlogon

RE: sbs2003 PDC and the BDC's, roaming profiles, w2kpro, log on

Key: [HKEY_LOCAL_MACHINE\Software\Microsoft\Windows
NT\CurrentVersion\Winlogon]

Value: UserEnvDebugLevel
Value Type: REG_DWORD
Value Data: 10002 (Hex)

After you make this change, reproduce this problem after rebooting this workstation. The log file is written to the %SystemRoot%\Debug\UserMode\Userenv.log file.

For details, refer to the following MS KB article:

221833 How to enable user environment debug logging in retail builds of Windows
<http://support.microsoft.com/?id=221833>

Please take your time to gather the information for research. If you have any updates, please feel free to let me know. I am looking forward to hearing from you!

Best regards,

Brandy Nee

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

Our sbs2003 is the PDC; there a three w2k servers are BDC.
Lately the operators with roaming profiles do not get their profile at log
on, workstation does not matter, they are all w2kpro, but if they log off

and

then log on a second time, they get their profile loaded. Can it be that

the

BDC's are the issue when users are not getting their profiles? Can it be

made

so that users ONLY LOG ON to the sbs2003 and not the BDCs?
