Hi Dirk-Thomas,

From your description, I understand the issue to be: you need input domain name/user name to access the OWA site. If I am off base, please don't hesitate to let me know.

Let us perform the following tests to see if it helps:

I. Please double check if you can just input user name (without the domain name) to access the OWA site. If you still able to log on to OWA by using just user name. On the OWA logon screen it now requests "Domain\username:" where I think it used to request just the username.

In this scenario, we can change "Domain name\user name:" on the logon screen to "User name:" by following these steps:

1. Open logon.asp in C:\Program Files\Exchsrvr\exchweb\bin\auth\usa with Notepad.
2. Find the following line:
CONST L_UserName_Text = "Domain\user name:"
3. Change "Domain\user name:" to "User name:".
4. Save the logon.asp.

II. If you cannot log on to OWA by using just user name (without the domain name), we can perform the following changes in IIS to resolve the issue:

1. Open the properties of the Exchange Virtual Directory (under the default web site).
2. Go to the Directory Security Tab
3. Click EDIT in Authentication and access control
4. Change the Default domain to match the NETBIOS Domain name of the organization.
5. Ok the changes.
6. Restart the default web site.

RE: OWA Authentication ? Domain/Name

Now, you should be able to access OWA using Forms Based Authentication by just typing in the Username.

Additionally it is recommended that you apply the Whole SBS 2003 SP1 to the SBS server box first and then apply Exchange 2003 SP2. You can refer to the following article to apply SBS 2003 SP1.

Installing Windows SBS 2003 with SP1, "Getting Started" at the Microsoft Web site (<http://go.microsoft.com/fwlink/?LinkId=51143>)

Also I would like to suggest that you take a look at the following article regarding to Exchange 2003 SP2.

Microsoft Exchange Server 2003 Service Pack 2 Release Notes
http://download.microsoft.com/download/f/b/5/fb5c54af-fe5c-48e9-be97-f9e8207325ab/Ex_2003_SP2_RelNotes.htm

Hope above information helps! I am happy to be of assistance to you and look forward to your reply.

Have a nice day!

Sincerely,

Jenny Wu

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

SBS 2003 Premium recent security packs including Exchange Server done. SBS NOT at SP1 yet Exchange 2003 is at SP2 but all up to date other than that. After doing the last Exchange security update I am back to needing to put the domain name/user name in before OWA lets me in. I remember a fix/cure for this but forgot it.

Can anyone lead me back in the right direction please?

Dirk-Thomas
