Hi,

I've got a HP Laserjet 1000 at my office. On the Server that I'm connecting to I have installed the HP Laserjet 1000 printer driver.

When I connect to RWW and to Printers and Faxes I can see that it has created a printer called

"HP Laserjet 1000 on servername (from RemoteUser) in session 3"

On the server in RWW if I load notepad and type a few words and then go print, the server immediately gives me a printer error saying failed to print.

If I check back on my local print queue I can see a print job with the following information:

Document name:

Remote Desktop Redirected Printer Doc

Status:

Spooling

Owner:

Tristan

Pages:

N/A

Size:

Shows nothing

Port:

Shows nothing.

Have wait 5 minutes and nothing is printing. It looks like I'm close, but for some reason it is not working...

Remote Printing with RWW Help Req.

Any ideas?

Thanks

Tristan
