Hi Jonathan,

If the issue persists, I would like to suggest that you call our CSS via phone so that a so that a dedicated Support Professional can assist with your request. In this way, it can make your issue resolved more efficiently.

To obtain the phone numbers for specific technology request please take a look at the web site listed below.

<http://support.microsoft.com/default.aspx?scid=fh:EN-US:PHONENUMBERS>

If you are outside the US please see <http://support.microsoft.com> for regional support phone numbers.

Thanks for your understanding!

Have a nice day!

Sincerely,

Jenny Wu

Hi Jonathan,

Thanks for your update.

I am afraid that the both principles are different. Please gather the files

stsadm.log, owstimer.log and w3wp.log from %windir%\temp folder and mail

Re: Email enable doc lib

Re: Email enable doc lib

to

me.

Also please double check if the Sharepoint time settings are correct and

it

should be same with the local computer's time settings.

Also please perform a test as follows:

1. On the SBS server box, open OWA site (<http://myserver/public>) and navigate to the public folder and send some posts with attachments to the public folder, then please refresh the page to see if you can see these posts.

Please let me know if you are required to input user name and password

when

you logon the OWA site.

2. Then please go to the Sharepoint site to check if there are attachments in the email enabled document library.

I appreciate your time.

Have a nice day!

Sincerely,

Jenny Wu

Re: Email enable doc lib

Jenny, things still aren't working... how about my idea of configuring Outlook to collect HTTP mail from the account??

If Outlook can't collect the public mail then SP won't!?!

I've tried all the variations in Outlook but none can collect, with the following common error:

Task 'http://server:81/:
Folder:Inbox Synchronizing headers.' reported error (0x800CCC39) : 'A resource conflict occurred. Another client may be accessing your

account. The

server responded 'Conflict'. '

"Jonathan Davey" <me@xxxxxxxxxxxxxxxx> wrote in message
news:uWikCbiYGHA.4060@xxxxxxxxxxxxxxxxxxxxxxxxxxxx

Hi Jenny,

I can not find UrlScan in System32 and therefore assume its not running

or

enabled.

I have disabled forms base Authentication from the default V.Smtp server and am able to browse directly to http://server/public

I have changed reg keys and have removed and replaced mailbox.

I will send you the logs shortly.

Jonathan

Hi

Thanks for your update. I appreciate your time to the issue.

I am sorry for the delayed response due to

Re: Email enable doc lib

weekend. Please understand that the newsgroups are staffed weekdays by Microsoft Support professionals

to

answer your systems and applications questions. Your understanding is greatly appreciated!

Please check if there is the UrlScan security tool is running on the Exchange computer, and the UrlScan security tool blocks the

X-MS-ENUMATTS

verb. If it is true, please refer to the following article to resolve

the

issue:

Documents that are attached to e-mail messages are not added to an e-mail-enabled document library in Windows SharePoint Services
<http://support.microsoft.com/kb/892317>

If it is not the situation, let us disable the FBA feature on the

default

OWA site and disable all anti-virus/anti-spam applications on the Exchange server to test the issue.

1. Open Exchange System Manager, navigate to Servers\ServerName\Protocols\HTTP\Exchange Virtual Server. Right-click

it

and choose 'Properties'.

2. In the properties window, click 'Settings'

Re: Email enable doc lib

tab, uncheck 'Enable

Forms

based authentication' option. Click 'OK' to close the dialog box.

3. Click Start->Run. Input 'iisreset' (without the quotation marks) and press Enter.

4. Go to SharePoint Central Administration page. Use the SSL URL: <https://Servername/public> for E-Mail-Enable document library.

Then please test the issue again and let me know the result.

Also please try to create a new site and a email enabled document

library

in WSS site and then try to send messages with attachment to the public folder to test. Please let me know the result.

If the issue still persists, please help me collect the following information for analyze:

1. Can you find any related error event logged in Event Viewer? If

yes,

you can paste the detail error information here or save them to .evt format file.

2. Please modify the following registry key values and enable logging

of

the WSS site. Then please reproduce the issue and mail me the log

files:

Re: Email enable doc lib

Re: Email enable doc lib

The level of logging can be configured with the registry keys:

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Shared
Tools\Web Server
Extensions\6.0\LogLevel]
@=dword:00000009
[HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Shared
Tools\Web Server
Extensions\6.0\MaxLogSizeKB]
@="20000"
```

Please modify the registries. Restart the IIS by using "iisreset". Reproduce the issue (configure a email enabled document library and

send

messages with attachment to the public folder), then gather the files stsadm.log, owstimer.log and w3wp.log from %windir%\temp folder.

Please send files to my working mailbox: v-yanniw@xxxxxxxxxxxxxx

I am happy to be of assistance to you.

Have a nice day!

Sincerely,

Jenny Wu

Hi
Jonathan,

I have tested the issue, I can not reproduce it. Let us perform test

as

follows and collect some information for me:

1. Please try to logon Public folder list using URL: <http://myserver/public> and then create a post, what is the result? If the process failed, please help me capture a

Re: Email enable doc lib

screen shot
of the
symptom.

2. Please
re-create
the virtual
server and
then test the
issue again.

3. Please
enable IIS
logging,
reproduced
the issue
(try to
access
public
folder to
create a post
and create
post with
attachment),
then mail

me

the

IIS log for
analyze. My
working
mailbox is:
v-yanniw@xxxxxxxxxxxxxx

To enable
IIS log:

a. Open IIS
MMC, right
click
Default
Web Site
and then
click
Properties.
b. Click
Website tab
and then
check

Re: Email enable doc lib

Enable logging.
c. Stop the Default Website and rename the existing IIS log files

under

C:\WINDOWS\system32\LogFiles.
d. Restart the Default Website and try Server Activesync to

reproduce

the problem and wait 15 minutes.
e. Go to the following folder:
C:\WINDOWS\system32\LogFiles and send them to me.

I appreciate your time!

Have a nice weekend!

Microsoft

Re: Email enable doc lib

engineers
can
only
focus
on
one
issue
per
thread.

Although

we
provide
other
information
for
your
reference,
we
recommend
you
post
different
incidents
in
different
threads
to
keep
the
thread
clean.

In

doing

so,
it
will
ensure
your
issues
are
resolved
in
a

Hi
Jenny,

I
have
read
carefully
the
link
you
gave
me
and
heres
what
it
said:

6.
In
the
Public
folder
server
and
root
path
box,
type
the
path

to

the

Re: Email enable doc lib

root
folder
on
the
Exchange
server
that
hosts
public
folders.

Note:
You
must
specify
the
server
name
for
the
public
folder

server,

not
the
fully-qualified
domain
name.
For
example,
use
http://server_name/public,
not
http://server_name.domain.company_name.c

Jenny,
as
you
can
see
it
does
include
"public"
That
is
why

Re: Email enable doc lib

I
asked
the
question.
Have
MS
made
a
mistake?

I
have
tried
both
ways,
that
is
<http://myserver:81>
and
<http://myserver:81/public>

Is
it
possible
to
test
the
virtual
mail
server
mailbox
with

Outlook

by
creating
an
HTTP
mail
account?

Jonathan
