Hi Carl,

Thanks for your information. I appreciate your time.

The error message indeed indicates that there is some process use the port 4125 when the issue happens.

What is your meaning of the sentence "Sorry this is so brief. We have another client to work on this morning"? Do you mean there is a client can logon remotely without problem through RWW site?

Let us perform the following test to isolate the issue:

1. Do you have any customized web sites running on IIS server? If yes, please disable them and run command "iisreset" (no quotation marks) to reset IIS server. then please try to logon to SBS server box to test the issue, what is the result?

2. Please perform a clean boot on the SBS server box to see if it helps.

A Clean Boot will allow us to isolate any device drivers or programs that are loading at startup that may be causing a conflict with other device drivers or programs that are installed in your computer.

- 1) Run MSCONFIG.EXE.
- 2) In the Services tab, click "Hide All Microsoft Services" and click "Disable All".
- 3) In the Startup tab, click "Disable All". Click OK. (This will temporarily prevent third-party programs from running automatically during start-up.)
- 4) Restart the computer and check whether the problem still persists.

If the problem does not occur, it indicates that the problem is related to one application or service we have disabled. You can use the MSCONFIG tool again to re-enable the disabled item one by one to find out the culprit.

3. If the issue persists, please add the registry keys to exclude TCP port 4125 from the ports available to the Remote Procedure Call service. To do

Re: port 4125

so:

Important: Please backup your Registry Editor lists first so that any unexpected thing happens, you can restore.

- A. On the SBS server, open Regedit.
- B. Add the registry key
"HKEY_LOCAL_MACHINE\Software\Microsoft\Rpc\Internet".
- C. To this key, add the following values:

Ports REG_MULTI_SZ 4125
PortsInternetAvailable REG_SZ N
UseInternetPorts REG_SZ Y

- D. Exit Regedit, restart the server and see if the issue persists.

I am glad to be assistance of you.

Have a nice day!

Sincerely,

Jenny Wu
Microsoft CSS Online Newsgroup Support
Get Secure! – www.microsoft.com/security

This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:
<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the "Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

Jenny,

1. I attached a screenshot of the error message I receive.
2. The error message screen shot I attached was taken on the server. This is the same error message we receive on ANY pc on the network, and the same error message received when using a pc outside of the network.
3. We can use RDP.
4. No new apps have been installed on the server within the last 2 months.
5. ISA Server has not been installed.

Re: port 4125

Re: port 4125

Sorry this is so brief. We have another client to work on this morning.

Thanks for your response.

Carl
