This article, although it describes a different issue, has the step-by-step for resetting IWAM and IUSR passwords and synching the IIS metabase:

<http://support.microsoft.com/?kbid=822699>

Hi Bill,

I seem to have exactly the same problem. Since I am still new to SBS 2003, would you mind describing the exact steps that solved the problem? I am not familiar with adsutil.vbs and the IIS metabase.

Many thanks

"Bill Glidden" wrote:

I think that the passwords for IUSR\_computername and IWAM\_computername in the IIS metabase and the local accounts did not match. I have since reset the local passwords to match the ones in the IIS metabase using adsutil.vbs to find the current passwords and AD users & computers to reset them. There are no more errors in the event log.

Does anyone know ehat this means and/or how to fix it?

Reason: Unknown user name or bad password  
User Name: IUSR\_W2KSVR1  
Domain: SBS

Re: IUSR\_ Logon Failures – Event ID 529

Logon Type: 8  
Logon Process: Advapi  
Authentication Package: Negotiate  
Workstation Name: W2KSVR1  
Caller User Name: NETWORK SERVICE  
Caller Domain: NT AUTHORITY  
Caller Logon ID: (0x0,0x3E4)  
Caller Process ID: 1140
