So you're just trying to get the previous PPTP VPN connection to work again? I'd try re-running the Configure Remote Access wizard in the Server Mgmt Console, Internet and E-Mail section.

If you still get the same result, go to Start -> Administrative Tools -> Routing and Remote Access. R-click your SBS -> Properties -> Security. Make sure the Authentication Provider is set to Windows, not RADIUS.

You'll also need to make sure that PPTP is enabled on the SonicWall, although it sounds like it is since you're getting errors logged on the server.

Thank you for responding. Yes there is an option where you can test the authentication. I could never get it to authenticate. So I went back to using the plain old PPTP with SBS2003. That is currently what I am having troubles with. The system event log is showing a lot of the 20189 errors that I listed in my previous post. I have tried to VPN from inside the network and I am still unable to connect. I don't know that much about connection request policies and that is what is being referenced in the event logs. I have compared the 3 standard access policies from this server with ones from another server and they are the same. I am at a loss. Anything ideas?

TIA

TRD

Re: VPN Broke

I'm not familiar with that particular SonicWall, but it should have a test button to see if it can authenticate to IAS, right? When you try that, do you get any kind of a specific error that might point you to what's going on? Have you enabled the logging in IAS?

I don't think you need a group policy for this as long as IAS is configured correctly. Is this SBS Premium with ISA? Does SonicWall have a doc on their support site telling how to configure it to authenticate with IAS?

I have been trying to setup IAS to work with a SonicWall 2040. What I am wanting to do is use the SonicWall VPN client to allow remote access. I want to setup the SBS2003 server to authenticate the VPN clients. When I setup IAS, I added the SonicWall as a Radius Client and setup a group policy for it. I was unable to get the Sonicwall to authenticate to the Radius server and now I can't use the sbs2003 vpn. below is the error I am getting in the system log when I try to connect with the PPTP VPN. I have looked at the standard GPO's that are created and they have not changed. I have deleted the GP that I created for the SonicWall and still no luck. The end result is to use the SonicWall VPN clients and have them authenticate to IAS. Can someone please assist me?

Event Type: Warning  
Event Source: RemoteAccess  
Event Category: None  
Event ID: 20189  
Date: 5/22/2006  
Time: 9:28:54 PM

Re: VPN Broke

User: N/A

Computer: SERVER

Description:

The user Domain\administrator connected from 00.00.00.00 but failed an authentication attempt due to the following reason: The connection attempt did not match any connection request policy.
