Correction – Receive, instead of Relieve... spell checker got ahead of me.

I seem to have an Exchange issue with SBS-2003. Users can send mail to internal addresses, internal to external – but not relieve any mail from outside the domain. Checked "Internet & Email Setup" and settings look to be correct. Assume it's due to IP Address change on the Server –but not sure exactly which area to check. Event Logs do not have any entries that relate to Exchange.
