Ok, I tried your recommendations, even got the hotfix, which by the way told me I do not have ISA 2004 installed. In reality, what it was saying is that it cannot install in ISA 2004 SP2, as when I removed SP2 for ISA, it installed, but the problem did not get fixed.

I called SBS Support, Business Critical, but were met with some of the most incompetent techs I have ever talked to. After they wasted 4.5 hours, I gave, I even reinstalled ISA 2004, but the ISA Service still won't start. No offence to you, I hope I just got some bad techs. Im certain there are competentn people on staff also. Time for a rebuild? It would certainly stop wasting my time.

Hi Attila,

Thanks for your update.

If this issue still occurs, let's do as following:.

1. Delete all the web publishing rules.
2. Locate the SBS companyWeb listener and SBS Web listener in the Network Objects (You can click Firewall Policy and then click Toolbox on the right pane.) in the ISA 2004 console.
3. Please export and delete the SBS CompanyWeb Listener.
4. Open the Properties page of SBS Web Listener and in the Preferences tab, please click to clear the check mark of Enable SSL. Click OK.
5. Apply the settings.
6. Try to start ISA service again and see if the issue will be reproduced.

If we could start the ISA service, let's recreate new certificate in the CEICW wizard. You could create a new certificate with different name and see if things could be improved.

Re: ISA Proxy Failure

I will look forward to hearing from you.

Best regards,

Crina Li (MSFT)

Microsoft CSS Online Newsgroup Support

Get Secure! – www.microsoft.com/security

=====
This newsgroup only focuses on SBS technical issues. If you have issues regarding other Microsoft products, you'd better post in the corresponding newsgroups so that they can be resolved in an efficient and timely manner. You can locate the newsgroup here:

<http://www.microsoft.com/communities/newsgroups/en-us/default.aspx>

When opening a new thread via the web interface, we recommend you check the

"Notify me of replies" box to receive e-mail notifications when there are any updates in your thread. When responding to posts via your newsreader, please "Reply to Group" so that others may learn and benefit from your issue.

Microsoft engineers can only focus on one issue per thread. Although we provide other information for your reference, we recommend you post different incidents in different threads to keep the thread clean. In doing so, it will ensure your issues are resolved in a timely manner.

For urgent issues, you may want to contact Microsoft CSS directly. Please check <http://support.microsoft.com> for regional support phone numbers.

Any input or comments in this thread are highly appreciated.

| Thank you so much for helping. As a SBS Partner, its important that I
get
| this fixed, as its my own server, and better for me to experience this
then
| my clients.

| Prior to your posting, I came across your first suggested fix already,
| namely:
| 837864 The Microsoft Firewall service does not start and event ID 7024
is
| logged in the system event log of the computer that is running ISA
Server
| 2004
| <http://support.microsoft.com/default.aspx?scid=kb;EN-US;837864>

| BTW, I do have SP for ISA 2004 installed.
| So here is what happened. It partially fixed the problem. In order to be
| able to start the Webn Proxy Service, I had to disable all the Web
| Publishing Rules. After the service started, I reenabled the four Web
| Publishing Rules, but two of them compained that thought they started,
they
| could not be added to the database. Following this, I ran the CEICW,
with
| Firewall Enabled selected, but it failed on the Network Configuration,
| however, was able to configure the rest. I ran the CEICW again, Firewall
| Disabled, and it was able to configure all settings including Network
| Configuration fine. However, OWA, RWA is still not possible from
outside,
| though luckily SMTP mail does come in.

| Next I deleted all four web publishing rules in ISA, ran the CEICW
again,
| but it repeated the same scenario above, if Firewall Enabled was
selected
| then Network Config failed, and if Firewall Disabled ws selected, the
CEICW
| completed fine.

| To note, in no case was I able to restart the ISA Proxy Service without
| first disabling all four Web Publishing Rules, including after many
reboots.

| Tonight, Im going to try your suggestion #2, 896495 The Firewall service

Re: ISA Proxy Failure

may
| not start in Internet Security and Acceleration (ISA) Server 2004 after
you
| select a certificate for a, SSL listener
| <http://support.microsoft.com/default.aspx?scid=kb:EN-US:896495>
| and let you know. I just got the hotfix mentioned in the article and
will
| apply it tonight.
|
| Thanks, and I will update you tomorrow.
