We're looking for references for a SBS consultant for the Plymouth MI area (roughly halfway between downtown Detroit and Ann Arbor). Comments or recommendations about consulting companies like Robert Half (rht.com) etc also appreciated.

One server, one domain, about 5 client PCs and <10 users. Need to:

- 1) Straighten out User setup (some have simple pointer to a My Docs folder on the server, some don't) possibly implementing GPO folder re-direction for all, and a review of policies assigned to each.
- 2) Review and possibly setup my backup plan (multiple external HDs in rotation using the built-in Backup software).
- 3) Review overall security and make recommendations.

Reply here with contact info please. Thanks.
