Hi Daniele,

Thanks for your update.

For current situation, we can isolate the issue lies in insufficient permissions. Let us install the Filemon and Regmon utility on one workstation to monitor it is which folder that is missing permissions.

I. First let us perform a clean boot on the workstation so that there is too many application running.

- 1) Run MSCONFIG.EXE.
- 2) In the Services tab, click "Hide All Microsoft Services" and click "Disable All".
- 3) In the Startup tab, click "Disable All". Click OK. (This will temporarily prevent third-party programs from running automatically during start-up.)
- 4) Restart the computer.

II. Please install the Filemon and Regmon utility on one problematic workstation and reproduce the issue.

Please use the following steps to capture data with these utilities. You will need to follow the steps below to use the utility.

- 1). Please visit the following link to download and save the Filemon and Regmon version for your operating system from the following Web site:
<http://www.sysinternals.com/ntw2k/source/filemon.shtml>

– Download "Filemon (x86 – 76 KB) – you plan on using Filemon on WinNT/2K/XP/2K3" if you plan to use Filemon on Windows 2000, Windows XP, or Windows Server 2003.

The following link for down Regmon utility:

<http://www.sysinternals.com/Utilities/regmon.html>

- 2). Familiarize yourself with the Capture and Clear buttons below the menu bar. You can alternatively use Ctrl+E and Ctrl+X.

RE: Unable to send any fax only from workstation

- 3). Stop the capture and clear the current events. This will allow us to capture minimal activity. There will be some activity that will be extraneous, but that's okay. We would rather have too much data than not capture the correct events.
- 4). Make sure your application is in a state where you are ready to reproduce the problem (try to send fax with a domain user account).

NOTE: In order to see minimal traffic from the utilities close all other applications that are not involved in the test.

- 5). Click the capture button or use Ctrl+E to start capturing data.
- 6). Reproduce the problem.
- 7). Stop the capture by clicking the 'Capture' button or use Ctrl+E.
- 8). Save each capture to a file, zip them up and send them to me for review. My working mailbox is: v-yanniw@xxxxxxxxxxxxxx

I appreciate your time.

Have a nice day!

Sincerely,

Jenny Wu

I have applied the step that you have described, but user cannot send
faxes.

If I change the group membership of users to "Domain Admins" those users
can

send fax and all works good.

When I return group membership of those users to "Domain Users" those
cannot

send faxes.

The inbound faxes don't have any problem whit all config.

I'm waiting for your help. :-)

Best regards.

Hi Daniele,

Thanks for using the SBS newsgroup!

From your description, I understand the issue to be: users can not send faxes from workstations. If I am off base, please don't hesitate to let

me

know.

Let us follow below steps to trouble shoot the issue:

I. Please check Fax server recipient configuration:

1. Open Shared Fax Manager
2. Expand Devices and Providers -> Devices
3. Right click your modem and click properties
4. In the Transmission settings, please confirm that "Send faxes" is Checked.
5. Right click Microsoft Shared Fax and click properties
6. In the General tab, please confirm that "Disable transmission of outgoing faxes" is NOT checked.

II. Check the following permissions settings:

1. Please double check the modem permissions and ensure "Everyone" has

Fax

permission.

2. Please double check the Temp folder's permissions on the server box,

it

is located in:

C:\WINDOWS\Temp

Right click it and open its Properties page, please ensure

"Authenticated

users" entry list here and have the following permissions:

RE: Unable to send any fax only from workstation

RE: Unable to send any fax only from workstation

— Authenticated users: Read, Write, Read & Execute, list folder contents

After verifying them and restarting the fax service, try to test to see

if

the fax server can receive faxes properly.

III. If the issue persists, please help me collect the following information for further analyze:

1. Do you have any issue to receive outbound faxes?
2. Please try to logon one workstation with domain admin user account

and

try to send faxes, what is the result?

Hope above information helps. I am happy to be of assistance to you and look forward to your reply.

Have a nice day!

Sincerely,

Jenny Wu

I'm unable to send any fax only from workstation. From the server I

don't

have problems.

Workstation was Windows XP sp2 and server is Windows SBS 2003 SP1.

When I try to send the fax, from workstation, systems don't send any

error

message. In fax console I don't view the fax in out queue.

What can I do ?

best regards

Daniele Benetti
