I have noticed recently that when e-mail sent to us at info .a1t rainbowskytravel d.01t com, the display in the e-mail shows it was sent to info .a1t modertravel d.01t net. Our server is setup primarily as modern travel, but when I initially set up the secondary e-mail for Rainbow Sky Travel, they showed up as the info e-mail address for Rainbow Sky Travel. I was wondering if there is a setting somewhere to get it to show up as info ..a1t rainbowskytravel d.01t com again. How could this have changed in the first place?

Thanks for the help!
