No ISA here.

We're just a small humble office. I installed SBS2003 mainly for the exchange feature and remote access capability. Perhaps a bit of overkill, but the install was easy, it seems to be running smoothly and I don't have enough time ear-marked as the designated IT person :-)

"thejamie" wrote:

Here is what it looks like locally: (I reinstalled the server about 4 days ago after a problem that resulted from installing SQL Server 2005 or I would give you an offsite copy as well.) I don't believe it is cause for concern. Still, it doesn't hurt to be concerned. Are you running ISA?

Logon Failure:

Reason: Unknown user name or bad password

User Name: MYLOGONNAME

Domain: MYDOMAIN

Logon Type: 3

Logon Process: IAS

Authentication Package: MICROSOFT_AUTHENTICATION_PACKAGE_V1_0

Workstation Name:

Caller User Name: MYSVRNAME\$

Caller Domain: MYDOMAIN

Caller Logon ID: (0x0,0x3E7)

Caller Process ID: 996

Transited Services: -

Source Network Address: -

Source Port: -

RE: Event ID 529

Thanks Jamie, I'll try that at home tonight to see what happens. Yet I'm still a bit confused. We're a 4 person office. No one here would have the means to attempt a log in from an odd domain name outside the network. Was this an attempted security breach?

"thejamie" wrote:

You get one of these for each time a user incorrectly types in their password or at least if they do this over a VPN (I am not using it internally – mostly via VPN). Try it. Go someplace outside of your network, login but use the wrong password. The system will record and report your attempt.
