I appreciate you sticking with this.

I tried connecting with the IP address and the same thing happens. The error I get is the standard RDP error:

The client could not connect to the remote computer. Blah blah blah, please try connecting later.

Oddly enough when I ping the client, it resolves the IP correctly but the pings do not go through. I can access the computer through network places and I can get to it using \\computername or \\ip address but no ping and no rdp.

"Alan" wrote:

I know we have already traveled this path somewhat, but could you try the following:

Try to RDP to the client machine using it's IP address (not it's 'name').

Does that make any difference?

Can you also post back with the exact error message you are getting – I don't think it was posted in full above, but if so, just post a link back to it.

Thanks,

Alan.

Re: RDP to clinets not connecting

This is valid as is. It is not munged, or altered at all.

It will be valid for AT LEAST one month from the date of this post.

If you are trying to contact me after that time, it MAY still be valid, but may also have been deactivated due to spam. If so, and you want to contact me by email, try searching for a more recent post by me to find my current email address.

The following is a (probably!) totally unique and meaningless string of characters that you can use to find posts by me in a search engine:

I have turned off the group policy that enables the firewall and then turned it off at the clients. I have also enabled remote access and added the domain admin to the users allowed to connect. This has been double checked and check again lol

Thanks

And you are certain that Remote Access is turned on for the username you are trying to access from (not an issue for Domain Admins I think as long as remote access is turned on at the target client)?

Thanks once again for the reply.

Yes both the IP address resolved by DNS and the IP address from the clients when ipconfig is run match.

Re: RDP to clinets not connecting

I'm at a loss as to why it
won't work.

Thanks

Hi
Alan,
thanks
for
the
info.
I
have
tried
all
that
you
suggested
and
I
can
browse
to
the
computers
and
access
resources
off
them
such
as
shares
and
printers.
When
I
ping
them
it

Re: RDP to clinets not connecting

resolves
the
IP
correctly
but
ping
fails
to
reach
them.

I
have
released/renewed
the
IP's
several
times
and
rebooted
the
clients
and
server
several
times.

Just to
clarify, are
you saying
that the IP
address
resolved on
your
workstation
for BobsPC
is the same
as the IP
that
BobsPC
reports
itself?

If not,
another
possibility
is that you
may have to
flush the

Re: RDP to clinets not connecting

DNS
cache on
your
machine:

IPCONFIG
/FLUSHDNS

Then reboot
(I think) and
try again.

Please can
yo upost
back to
confirm that
both your
workstation
via,
say, PING
BOBSPC)
and BobsPC
(via
IPCONFIG)
both report
the
same IP
address.

Thanks,

Alan.
